- More Soothing & More Gentle

A **"MUST HAVE"** FOR YOUR CLIENTELE!

Skin care management in cancer patients: an evaluation of quality of life and tolerability

Ann Cameron Haley & Cara Calahan & Mona Gandhi
& Dennis P. West & Alfred Rademaker
& Mario E. Lacouture
Northwestern University Feinberg School of Medicine

"Advance knowledge of side effects and proactive management approaches have been shown to decrease anxiety, improve adherence to cancer treatment, and improve Quality of Life and patient outcomes."

"A cancer skin care management program fulfills patient engagement of anticipatory coping in order to optimally anticipate and control cutaneous side effects associated with anticancer therapy."

"...these findings suggest that quality of life, as measured by Skindex-16, improves with products specifically designed for cancer skin care management."

"Our findings suggest that Quality of Life improves with test article use, all of which were rated as good/very good for tolerability."
